

B.0665R

CLAIMS

1. Electrical household food preparation appliance, comprising
5 a motor housing (1), a work container (2) provided to be placed on the motor housing (1), a lid (3) provided to close the work container (2), the lid (3) having a detection body (32) provided to cooperate with a transmission element (22) arranged in the work container (2) when the lid (3) is locked
10 on the work container (2), the transmission element (22) cooperating with a control element (16) arranged in the motor housing (1) to allow operation of the appliance when the lid (3) closes the work container (2) disposed on the motor housing (1), characterized in that the work container (2) can
15 be placed on the motor housing (1) in several angular positions and in that the control element (16) is mounted to be movable in rotation against a restoring means (70) and has several detection cams (40) arranged to cooperate with the transmission element (22).
- 20 2. Electrical household food preparation appliance according to claim 1, characterized in that the control element (16) forms a crown (43).
- 25 3. Electrical household food preparation appliance according to one of claims 1 or 2, characterized in that the control element (16) is mounted suspended to a body (15) of the motor housing (1) forming a pedestal (10) for reception of the work container (2).
- 30 4. Electrical household food preparation appliance according to one of claims 1 to 3, characterized in that the control

element (16) has side protuberances (41) engaged in side openings (60) of the motor housing (1).

5 5. Electrical household food preparation appliance according to claim 4, characterized in that at least one of the side protuberances (41) carries one of the detection cams (40) provided to cooperate with the transmission element (22).

10 6. Electrical household food preparation appliance according to one of the claims 4 or 5, characterized in that in that the side openings (60) are arranged in conformations (11) provided for blocking the work container (2) against rotation.

15 7. Electrical household food preparation appliance according to claim 6, characterized in that conformations (11) are concave.

20 8. Electrical household food preparation appliance according to one of claims 1 to 7, characterized in that the number of angular positions in which the work container (2) can be placed on the motor housing (1) is comprised between two and six.
